QUALITY POLICY

The Institute of Chemical Research of Catalonia, in fulfillment of its mission towards the strengthening of the competitiveness of the chemical and pharmaceutical industry by means of innovation and technological improvement, has established, implements and maintains a Quality Policy for Crysforma in accordance with the objectives and context of the Unit. This Quality Policy supports the strategic direction of Crysforma.

The Quality Policy is a tool for establishing the quality objectives of Crysforma and, additionally, defines a range of commitments supported by a set of premises:

- A commitment to fulfill all the applicable requirements, but flexible enough to adapt to a dynamic, changing and competitive environment defined by our customers' legal and normative requirements.
- To detect and assess the needs and opportunities Crysforma is facing, proceeding with the required actions, for the continuous improvement of the Quality Management System.
- To acquire and maintain a high scientific and technical level in the area of research and characterization of the pharmaceutical solid state (polymorphism, crystal salts and co-crystals).
- To promote continuous training and career development of Crysforma's personnel, and to generate a motivating work environment that facilitates the achievement of the objectives of the organization.
- To guarantee an efficient management of all the available resources required for the service delivery to our customers, with the appropriate quality and safety and under environmentally friendly conditions.

Dr. Miquel A. Pericàs Brondo
